

MIPATEX

DESIGNED FOR ADVANCED FARMING

MULCH FILM

Prevent Weeds, Protecting Soil & Crops

OVERVIEW

MIPATEX plastic mulch films are made from superior quality raw material. Our mulching films are suitable for almost every crop, withstand against any weather conditions, do not allow any light transfer, and are durable to secure crop yields and quality.

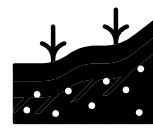

FEATURES:

Weed Control

Protect Soil
& Crop

Improves Soil
Structure

UV stabilized

Repels Pests

Water
Conservation

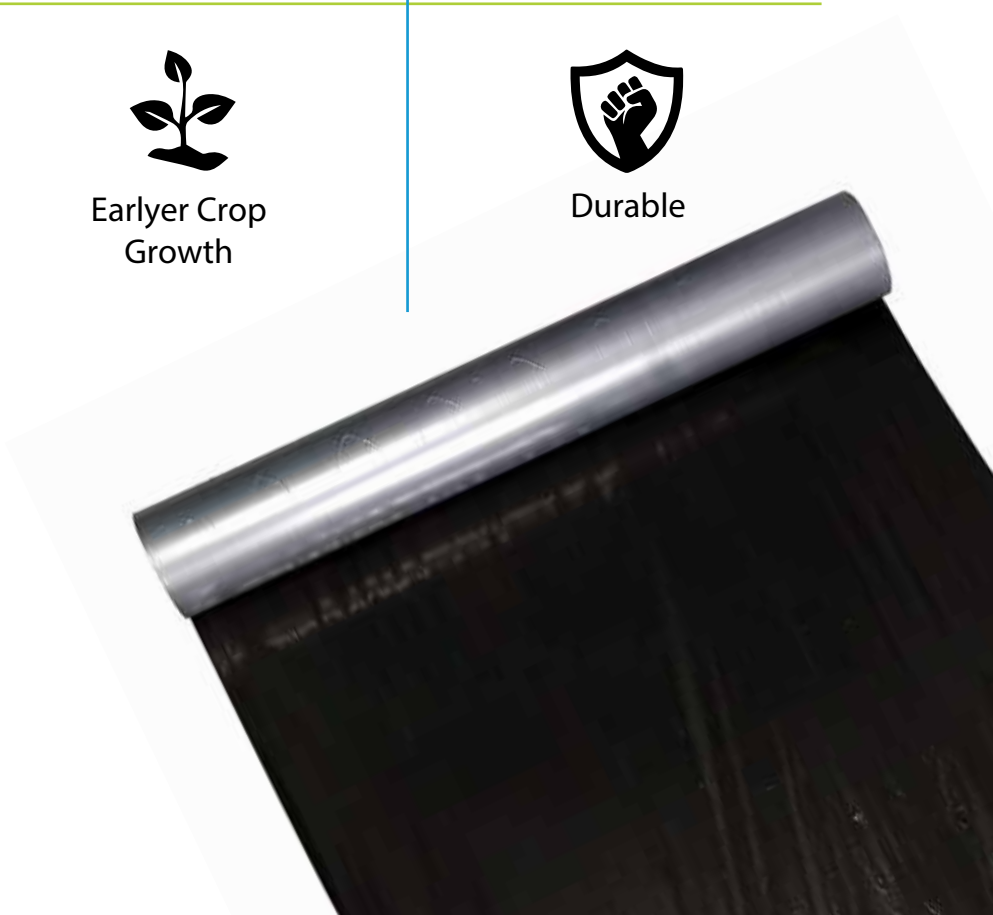

Easy to Use

Earlier Crop
Growth

Durable

FEATURES & BENEFITS

Durable: Manufactured from superior quality LDPE, LLDPE, adding additives and UV stabilizer using multi-layer co-extrusion blown film technology to make it highly durable and provide a long-lasting UV life.

Water Conservation: Mulch film helps maintain consistent moisture levels in the soil by reducing evaporation from the soil and helping maintain constant humidity in the root zone.

Weed Control: Silver/Black mulch film does not allow the sunlight to pass through onto the soil, which means photosynthesis does not occur in the absence of sunlight below mulch film, which can inhibit most annual and perennial weeds.

Improves Soil Structure: mulch film provides good insulation to the soil from temperature, rain, and other weather conditions, controls erosion, and helps the soil maintain good health.

Improved crop quality: mulch film prevents direct contact of fruit and vegetables with the soil, reduces fruit rot, and keeps the fruit and vegetables clean.

Earlier Crop Growth: Mulch film maintains a warm temperature even at nighttime, enabling seeds to germinate quickly, provide an optimized environment for growth, and help establish a strong root growth system rapidly. As a result, plant development is expedited and can be harvested sooner.

Repels Pests: Silver mulch reflects the sun rays that act as an insect repellent and reduce heat transmission. It distracts harmful insects and reduces plant morbidity due to insect-borne diseases.

FIELDS OF APPLICATION

Mulch film is a plastic sheet that covers the soil to limit moisture losses, weed growth and improves crop yield. It decreases water used in irrigation, prevents soil compaction, protects against erosion, and improves soil structure. Mulching film regulates the soil temperature evenly, insulating temperature-sensitive plants during the cooler months.

PRODUCT RANGE

Product	Thickness	Color	Width	Length
MMF-30	30 micron	Silver/Black, White/Black, Transparent, Color	1, 1.2 meter	400, 600, 800 meter
MMF-40	40 micron	Silver/Black, Color	1, 1.2 meter	400, 600, 800 meter
MMF-50	50 micron	Black, Silver/Black, Color	1, 1.2 meter	400, 600 meter
MMF-70	70 micron	Black, Silver/Black, Color	1, 1.2 meter	200, 400 meter
MMF-100	100 micron	Black, Silver/Black, Color	1, 1.2 meter	200, 400 meter
